

AgentSON Wiki Deployment

Cheat Sheet

Full reproducibility record — bugs, CLI versions, exact outputs
2026-07-05 | Author: Andrea Enning

Environment

Component	Value
OS	Windows 10 (Build 19045.6456) — Italian locale
Shell	PowerShell 5.1 (not pwsh)
Python	3.12
Git	Latest (2026)
GitHub Account	andiekobbietks
Repo	andiekobbietks/AgentSON (public, master)
Wiki Repo	andiekobbietks/AgentSON.wiki.git (separate endpoint)
OpenCode	MiMo V2.5 Free via OpenCode
OpenCode DB	~/.local/share/opencode/opencode.db (1.7GB SQLite)

What We Built

9 wiki pages pushed to github.com/andiekobbietks/AgentSON/wiki:

- Home — Landing page with 'Why This Exists' health data story
- Getting-Started — Install, export, search, fine-tune, view
- Schema — JSON Schema v1.1 reference
- Readers — 6 working + 27 planned tool readers
- ADRs — 11 Architecture Decision Records
- SOPs — 14 Standard Operating Procedures
- Coding-Standards — Non-negotiable code rules
- Mental-Models — How we think about problems
- Contributing — How to add readers, write tests, submit PRs

Step-by-Step (Exact Commands and Outputs)

Step 1: Create Wiki Content Locally

Command:

```
New-Item -ItemType Directory -Path 'C:\Users\LLM-Test\Documents\agentsong\wiki' -Force
```

Then created 9 markdown files using Python write() tool.

Step 2: Create Wiki on GitHub (Manual)

Go to github.com/andiekobbietks/AgentSON/wiki → click 'Create the first page'

Result: 'Your Wiki was created.' banner appears

Step 3: Clone Wiki Repo

Command:

```
git clone https://github.com/andiekobbietks/AgentSON.wiki.git
```

Output:

```
Cloning into 'AgentSON.wiki'...
remote: Enumerating objects: 3, done.
```

Receiving objects: 100% (3/3), done.

Step 4: Copy Files

Command:

```
copy agentsong\wiki\*.* AgentSON.wiki\
```

Output:

```
9 files copied: Home.md, Getting-Started.md, Schema.md, Readers.md, ADRs.md,
SOPs.md, Coding-Standards.md, Mental-Models.md, Contributing.md
```

Step 5: Commit

Commands:

```
cd AgentSON.wiki
git add .
git commit -m 'Add wiki pages'
```

Output:

```
[master 95badf9] Add wiki pages
9 files changed, 996 insertions(+), 1 deletion(-)
```

Step 6: Push with Token in URL

Commands:

```
$token = Read-Host -Prompt 'Paste PAT' -AsSecureString
$tokenPlain = [Runtime.InteropServices.Marshal]::PtrToStringAuto(
[Runtime.InteropServices.Marshal]::SecureStringToBSTR($token))
git remote set-url origin
"https://andiekobbietks:${tokenPlain}@github.com/andiekobbietks/AgentSON.wiki.git"
git push
```

Output:

```
Enumerating objects: 13, done.
Writing objects: 100% (11/11), 12.92 KiB | 2.58 MiB/s, done.
To https://github.com/andiekobbietks/AgentSON.wiki.git
e21356a..95badf9 master -> master
```

Bugs Encountered

Bug 1: Fine-Grained Token Cannot Push to Wiki

Command that failed:

```
git push
```

Error:

remote: Invalid username or token. Password authentication is not supported for Git operations.

Root cause:

GitHub fine-grained tokens have separate wiki permission — must be explicitly granted. Default is deny.

Fix:

Use classic PAT with 'repo' scope (includes wiki).

Bug 2: Password Authentication Deprecated

Command that failed:

```
git push (entered PAT as password when prompted)
```

Error:

remote: Invalid username or token. Password authentication is not supported for Git operations.

Root cause:

GitHub removed password auth for Git operations in 2021. PATs must be embedded in URL.

Fix:

Embed token in URL: `https://USER:TOKEN@github.com/USER/REPO.git`

Bug 3: Cached Bad Credentials

Command that failed:

```
git push (after failed attempt, even with correct token)
```

Error:

remote: Invalid username or token.

Root cause:

Windows Credential Manager cached the failed attempt. Git uses cached creds automatically.

Fix:

```
git config --global --unset credential.helper  
git config --global credential.helper store
```

Bug 4: Token Compromised by Sharing in Chat

Command that failed:

```
User pasted PAT into chat – visible to AI and potentially logged.
```

Error:

Any entity with the token can push to all repos with 'repo' scope.

Root cause:

Immediately delete compromised token at github.com/settings/tokens. Generate new one.

Fix:

```
Use $token = Read-Host -Prompt 'PAT' -AsSecureString (masked input)
```

Lessons Learned

1. Fine-grained tokens need explicit wiki scope — default is deny
2. GitHub password auth is gone since 2021 — PAT must be in URL
3. Cached creds persist across attempts — must clear credential helper
4. Never share tokens in chat — compromised immediately
5. Wiki is a separate git repo — different endpoint (.wiki.git suffix)
6. Classic PAT with repo scope covers wiki — fine-grained requires extra permission
7. Read-Host -AsSecureString masks input — prevents shoulder surfing
8. Token in URL format: https://USER:TOKEN@github.com/USER/REPO.git
9. ReportLab needs pip install first — not in default Python install
10. Windows copy uses backslashes — not forward slashes like Linux/Mac

Obsolete / Deprecated Commands

- git push with password prompt → DEPRECATED 2021 → Embed PAT in URL
- git config credential.helper store → WORKS BUT INSECURE → Use Read-Host -AsSecureString
- Fine-grained token for wiki → INSUFFICIENT PERMS → Classic PAT or grant wiki scope

The Working Method (Copy-Paste Ready)

- # 1. Generate classic PAT with repo scope at github.com/settings/tokens
- # 2. Run these commands:

```
cd C:\Users\LLM-Test\Documents
git clone https://github.com/andiekobbietks/AgentSON.wiki.git
copy agentsong\wiki\*. * AgentSON.wiki\
cd AgentSON.wiki
git add .
git commit -m 'Add wiki pages'
$token = Read-Host -Prompt 'Paste PAT' -AsSecureString
$tokenPlain = [Runtime.InteropServices.Marshal]::PtrToStringAuto(
    [Runtime.InteropServices.Marshal]::SecureStringToBSTR($token))
git remote set-url origin
"https://andiekobbietks:${tokenPlain}@github.com/andiekobbietks/AgentSON.wiki.g
```

```
it"  
git push
```

File Locations

- Wiki source files: ~/Documents/agentsong/wiki/
- Cloned wiki repo: ~/Documents/AgentSON.wiki/
- Main repo: ~/Documents/agentsong/
- OpenCode DB: ~/.local/share/opencode/opencode.db
- Cheatsheet PDF: ~/Documents/agentsong/wiki/AgentSON_Wiki_Cheatsheet.pdf
- Session: FreeStyle Libre — ses_1069f6208ffe...XozEyNyMW6RXOO (slug: gentle-engine)
- Session: Current — ses_0cbd91919ffey...YUXTVAIBZXQu7 (slug: jolly-cabin)

- GitHub Wiki: <https://github.com/andiekobbietks/AgentSON/wiki>

Remaining Tasks

- Wiki deployment — **DONE**
- README 'Why This Exists' section — **DONE — committed locally**
- Push README to remote — **TODO** — needs PAT push
- Push ADR-011 + modified files — **TODO** — needs PAT push
- Fix reader count (6 vs 7) — **DONE — fixed in README**
